## FASAL AMRIT

### PRODUCT DESCRIPTION

Fasal Amrit is an organic Super Absorbent Polymer made by biowaste of fruits peels. It is useful to reduce the irrigation water & fertilizer requirement and help to get more yield without affecting the soil and crop. The product can enhance soil health by providing micronutrients and maintain the moisture content along with helping the growth of microbe which is almost at zero level due to the high usage of chemical fertilizer. As a result, irrigation water requirement is reduced after 10-12 days with this water-retaining natural polymer which can absorb 100 times more water.

### DOSE & METHOD OF APPLICATION

- 5 kg per acre (vary as per soil type).
- Mix natural hydrogel with fertiliser/compost/soil and apply throughout the field by seed drill machine or simply spreading.
- Plough the field well enough to make sure natural hydrogel gets mixed into the soil properly.
- Do sowing or plantation and make sure to water it after applying natural hydrogel.

PACKAGE SIZE 1 liter

### TARGET CROPS

Can be used in any crop like cereals, pulse, vegetables, tuber, fiber, ornamental, oil seeds and fruit crops.
