MORE THAN 100 LIVE SPORES

MAINTAINS SOIL HUMIDITY

5 SPECIES OF MYCORRHIZA

ENRICHED WITH ORGANIC CARBON

SPOREMAX (BIOFERTILIZER)

PRODUCT DESCRIPTION

Sporemax is a bio-fertilizer which contains Mycorrhiza fungus. We formulated Sporemax by using all form of Mycorrhiza i.e spore, mycelium and root particle with vesicle in single formulation. Sporemax contain both ecto and endo spore of Mycorrhiza. After application near root zone, spore available from Sporemax get activated and make symbiotic association with plant root. Here VAM (Vesicular carbuncular Mycorrhiza) grow extra as well as intra cellularly.

INGREDIENTS

Mycorrhiza i.e spore, mycelium and root particle with vesicle with carrier.

ADVANTAGES

- Help plant to get nutrients, water easily.
- Maintain humidity of plant at the time of drought.
- Develop extra root system (tertiary root system) so increase area of nutrient and water absorption.
- Increase fertilizer use efficiency.
- Provide more stability to plant.
- Has more than 5 different strains of Mycorrhiza.

DOSAGE 100 gms per acre

PACKAGE SIZE 100 gm

METHODS OF APPLICATION

Soil Application or by drip irrigation.

TARGET CROPS

Can be used in any crop like cereals, pulse, vegetables, tuber, fiber, ornamental, oil seeds and fruit crops.
